

Tightwad.

Made from heavy duty 316 Stainless Steel, ABA Marine hose clamps will help keep your investment “wad” tight with very high clamping force. The non-perforated band with smooth inside and rounded edges glides into place, distributing the clamping force evenly all around without cutting valuables on the inside. The even clamping force helps ensure that there will be no weak points where a leak could occur, avoiding expensive repair jobs and downtime.

To learn why professional mariners trust their investments to ABA Marine hose clamps, visit our website or call us today.
