FOLDING SHORT SIDES
SORTING & STACKING

Pivatic's punch and panel bend centers work straight from coil and can perform a long line of complex processes fully automatically. Pivatic's technology is surprisingly uncomplicated and simplifies set up and maintenance while ensuring maximum up-time.

Pivatic's equipment saves on material cost because coil has a lower market price than blanks. Coil also maximizes material utilization as all parts are cut back-to-back.

Pivatic's punch and panel benders can be equipped with fully automatic material handling systems for unmanned 24/7 production.
